

## Case Study, Children's Comic App, ComixIT

Exciting Start-up building an application to encourage primary school age children to read rather than watch video's online.

Programme of work; to take some very basic high level designs and concepts, similar to Netflix and Disney to produce an online iOS and Android app for children to read back catalogues of UK and Western Comics from creative producers who have published great classics like Denis the Menace from the Benoit and other publishers. The app will also allow new publishing houses to upload graphical content/comics for Children in the sub 10 year old age groups.

The application is being further developed by us to allow for the creation of art work and stories / comics by the children themselves, so they can upload and share.

Currently live in the respective app stores the product is undergoing further development to include a paywall and the creators upload portal.

Technologies: Multiple, AWS hosted, React Native, Expo, C#, ASP .Net Modular Monolith, Terraform, Typescript
